17	Doubtful Sound (NZ) 01/21/2017
18	Milford Sound (NZ) Disembarkation 01/22/2017 at 06h00

YOUR CRUISE

The Subantarctic Islands are among the last unspoilt environments on Earth. Almost half of the world's albatross and penguin species reside here and The Snares Island alone boasts more nesting seabirds than the entire realm of the British Isles. For nature lovers, birders, photographers, and travellers wishing to venture where few have gone before, these UNESCO World Heritage Sites provide a truly privileged glimpse into a unique world.

An expedition to some of the least visited destinations on the planet with a team of expert naturalists and the Expedition Leader Mick Fogg, Australian award-winning wildlife photographer and adventurer.

An opportunity to see; 50% of the world's penguin species including the two rarest species as well as 10 of the 24 species of Albatross. There are also a large number of threatened endemic land birds including one of the world's rarest ducks.

95% of the world's population of New Zealand sea lion breed here.

Breeding populations of New Zealand, Antarctic and Subantarctic Fur Seals as well as Southern Elephant Seals.

Landscapes on a breathtaking scale, glacial fiords 100,000 years in the making, ancient forests untouched since the dawn of time.

Guided walks on Auckland, Campbell and Macquarie Islands.

Zodiac® expeditions at most of the destinations.

FOCUS ON... MILFORD SOUND

Milford Sound fjord is among one of the most beautiful natural sites in New Zealand. So much beauty will quite simply take your breath away. Located on the south-west coast of South Island, in the Fiordland National Park, this sumptuous inlet carved out by glaciers advances over at least 15 kilometres inland, in the Southern Alps. Majestic cliffs seem to surge out of the dark waters, rising several hundred metres high: an abrupt relief from where impressive waterfalls cascade.
